SOFTWARE ENGINEER

Experience

Frontend Developer, Point plus Food Delivery Website

Point plus 2024

- Single-handedly developed and maintained the Point plus Food Delivery website using Next.js for frontend development
- Streamlined the checkout experience on our food delivery platform with Kuda, enhancing payment processing reliability and customer satisfaction.
- Integrated APIs and backend services to fetch and display data in real-time using Axios and RESTful API calls.

Fullstack Developer, Wedding Whisper Website

Wedding Whisper 2022

- Independently designed, developed, and maintained the Wedding Whisper website.
- Implemented secure authentication mechanisms such as email verification and password encryption to protect user data.
- Enabled users to manage their accounts, including profile updates, password changes, and share details about their upcoming wedding with their guests..

Education

(2021-2023) Bachelor of Computer Science

National Institute of Information Technology (NIIT)

- Received the Academic Excellence Award for exceptional academic achievements.
- Created and designed various websites and applications to showcase skills in web & software development.

About me

As a Software Engineer, I am dedicated to designing, developing, and maintaining innovative software and web solutions that solve complex problems and drive technological advancements. My role is at the heart of the software and web development process, and I specialize in creating robust and efficient applications and websites while adhering to industry best practices and emerging technologies.
